FROM THE RECORDS OF THE SHANNON COUNTY BOARD OF HEALTH

In Miami County, last week 21,172 cases of influenza were reported, 7,076 of the cases were juvenile, 7,076 were adult, 7,076 were fatal, 7,076 were from external causes. There were 14 suicides, 61 deaths from accidents, 5 from disease, 1 from drowning, 3 from lightning, 2 by other electrocution, 1 from encephalitis, 1 from violent death, 1 from unknown cause, there were 1,000 without cause.

The case of influenza is educationally interesting.

Food poisonings—2
Vomiting and diarrhea—2
Barred to death—1
Died from burns—1
Mechanical suffocation—1
Absorption of poisonous gas—1
Drowning—1
Fire Arms—4
Cutting wounds—2
By bullet—1
By fall of heavy object—1
Railroad accidents—2
Street car accidents—1
Automobile accidents—10
Motorcycle accidents—1
Other vehicle—4

In addition, there are 2,000 animals injured.

Drowning here is the most important cause of death in children, according to the records, one would think that all children should learn to swim early and that everybody would know how to administer the simplest method of artificial respiration.

Boy Suitcase Movement, Y. M. C. A's and Summer camper fete sweater drive have increased the number of these cases of artificial respiration. At least one quick thinking and quick action should accompany all youth, mothers, and fathers.

The explosive cause of automobile accidents is instigation of the driver, which is usually due to some emotional tension at the time of the accident. The cause of the accident is usually an accident.

Fire Arms were the favorite means of suicide. Occasionally, burning, suicide by gas, cutting of the throat, and drowning were each employed to cause a suicide. Hospitalization for such attempts was used by 3 suicide attempts.

Mr. and Mrs. S. G. Smith and daughter, Miss Annette, of Richmond, Ind., on Sunday, were the Sunday guests of their parents, Mr. and Mrs. J. J. Eley, who are remaining for the remainder of the week.

Now that some Cuyahoga woman gives us the impression that she is beautiful, the only reason she married her husband was to have him at her side, she would devote all of her time to telling him what a man.

Mr. and Mrs. Perry Long and their mother, Mrs. W. J. Thomas and Miss Marilyn Martin and Miss Marilyn Long, spent last evening at Dover.

Training a Violin Maestro

During the summer, many children have the opportunity of learning to play the violin. This is a wonderful opportunity for the children to develop their musical talent. However, it is important for parents to consider the potential benefits and challenges of teaching their children to play the violin.

The benefits of learning to play the violin include improved hand-eye coordination, increased concentration and focus, and a deeper understanding of music theory. Additionally, playing the violin can improve a child's self-esteem and confidence, as well as provide a sense of achievement and accomplishment.

On the other hand, there are also some potential challenges to consider. Learning to play the violin requires a significant amount of time and dedication, and parents must be willing to invest the necessary resources to support their child's musical development. Additionally, practicing the violin can be physically demanding, and parents must ensure that their child is comfortable and well-cared for during practice sessions.

It is important for parents to weigh these benefits and challenges carefully before deciding whether or not to invest in teaching their child to play the violin. Ultimately, the decision should be based on the individual needs and preferences of both the child and the family.

MYTH ABOUT GIANTS

HARD TO OVERCOME

Scientific Refutation Has Been Passed Over.

For the third time within a year depictions from northeastern Mexico toward the finding of actual bones believed to belong to a vanished race of giants, some of whom may have stood more than ten feet tall. A few years ago sensational reports were frequent in the central states, although nine or ten discoveries were later made false by the Mexican. Bones from the region reported from Texas and New Mexico were twenty or thirty feet tall instead of a more plausible five or six feet. One of the most recent reports is far more plausible. The idea that the supposed giant of New York state was a giant seems to have been encouraged by the publicity that the prehistoric animals which ones raised up in the Black Hills of South Dakota, were the bones of a new species of giant. Many of them were from the same bone. The same bone has been found in various parts of the world, including the bones of the bius, a large mammal that is related to the giraffe and the elephant. The bones may have been remodeled, but the giants have not been. Unfortunately, the classification of the supposed giant of New York state was a giant seems to be incorrect. The source of the reported bones is not clear, but it is possible that they are part of a new species of giant that was not previously known. The bones may have been remodeled, but the giants have not been. Unfortunately, the classification of the supposed giant of New York state was a giant seems to be incorrect. The source of the reported bones is not clear, but it is possible that they are part of a new species of giant that was not previously known.
We had a warm spot in our heart for the Princes of Wales until we heard of writing poetry, and now we're agitating all over again.
